Development of ONR

- The Office for Nuclear Regulation (ONR) was launched on 1st April 2011
- ONR brings together the Safety, Security, Safeguards and Radioactive Materials Transport functions
- A single, integrated regulator that is responsive to the many, often rapid, changes

Key Enablers

One of the key enablers we identified to achieve our mission was:

- **Knowledge Management**

This means we manage, share and use our information and knowledge effectively

Office for Nuclear Regulation

An agency of HSE

What does this mean

We have to collect the right information and make sure we share and use it to inform and guide our decision making. If we manage our knowledge well it should help us set the right standards and use our systems (eg business management system) to regulate better and more consistently. We therefore also need fit-for-purpose IT systems in place to support the management, sharing and use of our information and knowledge. The major challenge we are facing at the moment is that many key people are reaching retirement age soon and we have to ensure that we retain our core knowledge.

Challenges Ahead

- **All Nuclear regulators on a common secure IT platform.**
- **How is that securely shared between the wider Nuclear community.**
- **How do we differentiate between the ‘need to know’ to the ‘need to share’.**
- **How is knowledge shared between regulators worldwide.**

Other Areas for Thoughts

How do we share information with other stakeholders for example:

- Emergency services.
- Local Governments
- At Incidents

GNSSN limited workspace areas would help up achieve this.

Thank you for listening.
