

Title: Workshop on Regulatory Approaches for Licensing for NPPs and Development of related Nuclear Safety Regulations

Location: Ulaanbaatar, Mongolia

Dates of Mission: 2013-07-22 to 2013-07-26

Objectives:

To facilitate and to provide technical backstopping during the conduct of the standard workshop package and also to deliver presentations indicated in the workshop agenda.

Duties performed:

Participants became familiar with the detailed process of drafting of safety regulations and implementing guides for regulating the construction, commissioning and operation of nuclear power plants. Participants learned how to develop a roadmap to address specific issues related to the regulatory approach and the development of regulations and implementation guides in their own countries.

The workshop included power point lectures, practical examples from member states of the IEXs and case studies related to the agenda topics concerning the development of safety regulations and guidance documents. For each topic a core set of lectures based on the IAEA safety standards and associated technical knowledge was presented. The core set was further illustrated by country specific example(s) of application of the core set concepts and exercises (case studies).

Conclusions:

Participants highly enjoyed the cases studies. Case studies facilitated better understanding of the lecture topics by the participants.
