

Title: Self-Assessment Training

Location: Amman, Jordan

Dates of Mission: 03 – 07 March, 2013

Objectives:

As part of Jordan's preparation for IRRS in 2014 (and as an embarking State) to provide the Jordan regulatory body with training and familiarisation in the IAEA methodology for self-assessment and the use of the associated software tools, SARIS and IRIS. In addition, to provide preliminary information on the IRRS process.

Highlights of the Workshop:

The IAEA self-assessment methodology was addressed in detail in the context of preparation for IRRS and as a nation embarking on a nuclear power programme.

As Jordan is an 'embarking country', both SARIS and IRIS were covered in depth, ensuring understanding and Jordan's capacity to implement a self-assessment programme in accordance with the IAEA IRRS Guidelines in good time before the IRRS mission in 2014.

Conclusions:

The Jordan regulatory body is able to commence a comprehensive self-assessment using the IAEA methodology and tools as part of its preparation for IRRS in 2014.

The event was carried out with funding by the European Union
